

⚙ RIS Room Display — IT Support

Setup, troubleshooting, and maintenance reference

System architecture

Tablets

LG 10SM3TB · Android 4.4.2 ·
Chrome 42

Hosting

GitHub Pages via Cloudflare
Worker proxy

Auth

Azure AD OAuth2 implicit flow +
iframe renewal

Key URLs and credentials

Kiosk URL (tablets)	<code>ris-display.ris-display.workers.dev</code>
GitHub repo	<code>github.com/Pom7220/Display-Room</code>
Service account	<code>rismeetingroomsystem@central.co.th</code>
Tenant ID	<code>817e531d-191b-4cf5-8812-f0061d89b53d</code>
Client ID	<code>80648895-4acf-4ac5-b4a3-c5bf6bc98983</code>
APK password	<code>a0000</code>

New tablet setup (one-time)

- 1 Install APK from USB — Settings → Apps → allow unknown sources
- 2 Connect to office WiFi
- 3 Reboot — APK auto-launches Chrome → config screen appears
- 4 Enter room name + email (Tenant/Client IDs are pre-filled) → Save
- 5 Sign in as `rismeetingroomsystem@central.co.th` → done

Troubleshooting

Symptom	Cause	Fix
Microsoft account picker appears	Azure AD session expired (after 24h)	Sign in once. For permanent fix: IT sets Persistent browser session on service account (extends to 90 days)
"No meetings" or blank screen	WiFi disconnected or token expired	Check WiFi. Long-press gear (5 sec) for debug log. Reboot to trigger auto-launch
Room shows "Available" but Outlook shows booked	Calendar refreshes every 90 sec	Wait 90 sec. If still wrong: check service account has Full Access to room mailbox in Exchange Admin
Old version still showing	Service worker cached old files	Ensure <code>CACHE_VERSION</code> in <code>sw.js</code> was bumped. Tablets auto-reload within 5 min of inactivity

APK install: "conflicting signature"	Different signing key from old APK	Settings → Apps → uninstall old APK → install new one
--------------------------------------	------------------------------------	---

Deploy checklist (code updates)

- ❑ Bump APP_VERSION.patch + date in index.html
- ❑ Bump CACHE_VERSION in sw.js to match
- ❑ Bump ?v= cache-bust on ris-shared.js script tags (if changed)
- ❑ Run ES5 pre-flight: `grep -c "=>\|const \|let " index.html` → must be 0
- ❑ Push to GitHub → Pages auto-deploys → tablets update within 5 min

File versions

File	Version	Purpose
index.html	v3.10.15	Kiosk display (ES5, Chrome 42)
dashboard.html	v2.0	Mobile dashboard (ES6)
ris-shared.js	v1.2	Shared calendar logic (ES5)
msal-v1.min.js	v1.3	Auth library with iframe renewal
sw.js	ris-v3.10.15	Service worker (network-first cache)
boot-launcher	v1.2	Android APK (auto-launch on boot)

i Debug mode: long-press gear icon 5 seconds. Settings PIN: 1234 (default). Cloudflare Worker: dash.cloudflare.com → Compute → Workers → ris-display
